CS 372   **Introduction to Computer Networks**
Self-Check Exercises: Lecture 39

1) What is the difference between "wireless "and "mobility" in terms of networking?

2) Describe a scenario that is *wired*, but still *mobile*.

3) Describe a scenario that is *wireless*, but not *mobile*.

4) What multiple access control scheme does 802.11g Wifi use?

5) What are some differences between wired and wireless links?

6) Describe the RTS/CTS channel reservation scheme.

7) When using RTS/CTS, are collisions still possible?
